

Lavanya Simham

Full Stack Java Developer

Missouri, USA | +1 (417) 429-5557 | lavanyasimham@gmail.com | [linkedin.com/in/lavanyasimham](https://www.linkedin.com/in/lavanyasimham)

SUMMARY

- Full Stack Java Developer with 5+ years of hands-on experience building secure, cloud-native, and event-driven enterprise applications across telecom, retail, and utility domains.
- Designed and developed secure, cloud-native enterprise applications using Java, Spring Boot, and RESTful microservices, implementing Spring Security with OAuth 2.0/JWT for scalable authentication and data protection.
- Built dynamic, responsive front-end interfaces with React.js, Angular, and Bootstrap, seamlessly integrating Figma-based UI designs to deliver engaging, high-performance user experiences across devices.
- Skilled in working with SQL databases (MySQL, PostgreSQL, Microsoft SQL Server) using queries, stored procedures, and performance tuning.
- Hands-on with event-driven systems using Apache Kafka and Netflix Eureka for real-time updates and service discovery.
- Experienced in test-driven development and automation with JUnit, Mockito, Cucumber, Postman, and SonarQube, consistently improving code quality and coverage.
- Strong knowledge of CI/CD pipelines using Jenkins, Maven/Gradle, Docker, and Kubernetes, supporting deployments on AWS EC2 for reliable releases.
- Familiar with Splunk for monitoring and observability, and Swagger/OpenAPI for documenting REST APIs to improve clarity and maintainability of services.
- Passionate about continuous learning and staying updated with the latest industry trends and technologies to drive innovation and efficiency in software development.

SKILLS

Programming Languages:	Java, SQL, JavaScript, TypeScript, Python, C, C++
Frameworks & Libraries:	Spring Boot, Spring Security, Spring Data JPA, Hibernate, React.js, Angular, Bootstrap, JSP, Spring AOP
Web Technologies:	HTML5, CSS3, RESTful Web Services, Microservices Architecture
Java/J2EE Technologies:	Servlets, JPA, JDBC, JSP, JSTL, Webservices, Microservices
Database:	MySQL, PostgreSQL, Microsoft SQL Server, Oracle SQL, DynamoDB, MongoDB
Cloud & DevOps:	AWS (EC2, S3), Azure, Docker, Kubernetes, GCP(Google Cloud Platform),PCF(Private Cloud)
IDEs:	Visual Studio Code, Eclipse IDE, IntelliJ IDEA, Spring Tool Suite (STS)
Messaging & Event-Driven:	Apache Kafka, Netflix Eureka
Testing Tools	JUnit, Mockito, Cucumber, Jasmine, Postman, Veracode, SonarQube, JaCoCo
Build/ Other Tools:	Git, GitLab, Bitbucket, Jenkins, Maven, Gradle
Tools & Monitoring:	Git, Bitbucket, Splunk, Swagger/OpenAPI, Jira, Figma

PROFESSIONAL EXPERIENCE

Web Developer | MSU, US

Aug 2024- Dec 2025

- Assisted in developing and maintaining university web applications using React.js, JavaScript, HTML, CSS, and Bootstrap, ensuring improved user experience.
- Supported integration of RESTful APIs, performed basic debugging, and assisted with website performance testing, helping improve site speed and system reliability.
- Monitored university websites for downtime and troubleshoot issues, ensuring smooth accessibility for students and staff.
- Collaborated with IT staff and student teams to improve website usability and accessibility, resulting in faster navigation and increased positive user feedback.

Full Stack Java Developer | TCS - Verizon, India

May 2023 - Jan 2024

- Built and enhanced the One Fiber ordering & status portal using React.js (frontend) and Java 8 / Spring Boot microservices (backend), enabling Verizon customers to place orders and track fulfillment in real time.
- Developed dynamic status-driven table views and backend logic using Spring Data JPA (stored procedures/queries), improving order visibility and reducing manual reconciliation efforts.
- Designed and exposed RESTful APIs for order management, documented endpoints with Swagger, and validated API flows using Postman.
- Secured APIs with OAuth 2.0 and JWT authentication, implementing role-based access control (RBAC) in Spring Security to enforce compliance and data privacy.
- Delivered event-driven order updates by integrating Apache Kafka, ensuring downstream services received real-time notifications for status tracking and reporting.
- Increased reliability with JUnit, Mockito, and Cucumber tests, achieving ~85% coverage, and enforced SonarQube quality gates, reducing post-release defects by 20%.
- Used Jenkins with Maven builds and Docker containerization to build and deploy applications, deploying on AWS EC2 and working with Kubernetes and PCF orchestration for scalability and high availability.
- Authored runbooks and technical documentation to standardize troubleshooting and accelerate production support.
- Actively participated in Agile/Scrum ceremonies, applied SDLC best practices, and worked closely with clients to refine requirements and deliver features on time.

Java Full Stack Developer | Brillio - Verizon, India

May 2022 - Apr 2023

- Designed and developed the Wireless IP Automation project, enabling generation, update, and deletion of IP addresses based on client requirements using Java, Spring Boot, and MySQL, improving operational efficiency by 30%.
- Implemented an IP reallocation microservice that automatically detected unused Wi-Fi IPs and reassigned them to new customers with slight octet variations, optimizing resource utilization and reducing IP wastage by 40%.
- Built and exposed RESTful APIs in Spring Boot for IP lifecycle management (allocation, update, release), ensuring scalability and high availability in distributed systems.
- Applied Spring Data JPA with MySQL to manage IP allocation tables, ensuring data consistency, integrity, and faster retrieval of available IP addresses.
- Integrated Veracode for code security, achieving a 20% reduction in vulnerabilities and enhancing application security practices.
- Developed a React.js front-end interface based on Figma designs, enabling users to view, allocate, and release IP addresses in real time, while integrating seamlessly with backend Spring Boot APIs to enhance usability.
- Integrated Spring Security and role-based access control (RBAC) to secure IP management APIs, enforcing authentication and authorization compliance.

- Designed and executed unit and integration tests using JUnit and Mockito, while leveraging Postman for API validation and contract testing, which increased test coverage by 20% and reduced production defects by 15%.
- Utilized Git for version control and implemented Jenkins CI/CD pipelines with Dockerized deployments and Splunk monitoring, reducing deployment cycle time by 25% and improving release reliability.
- Registered services with Netflix Eureka for service discovery, ensuring seamless scaling and inter-service communication.

Java Developer | Infosys - FPL, India

July 2020 - May 2022

- Contributed to full-stack application development in retail and electric utility domains, enhancing customer service efficiency and operational reliability.
- Built an E-commerce application with Java, Spring Boot, REST APIs, Angular, HTML, CSS, Bootstrap and MySQL, enabling sellers to post “Deals for Today” and customers to view them in real time.
- Developed responsive front-end modules using Angular, HTML, CSS, and Bootstrap, improving user experience and ensuring seamless integration with backend APIs.
- Collaborated with team members to manage code in Bitbucket, coordinate testing with Postman, and maintain data consistency across MySQL and PostgreSQL environments.
- Implemented a new feature in the Auxiliary Power Supply Module (ALS) to automatically send daily meter readings via email, using JDBC and SQL, improving reporting reliability and reducing manual verification.
- Enhanced the Storm Outage Communication System by integrating Java services, JavaScript, and Google Earth APIs to analyze customer tickets, outage hierarchies, and weather data, enabling faster and more accurate outage resolution.
- Deployed applications on AWS EC2, and implemented Docker containerization with Jenkins CI/CD pipelines, reducing release cycle time by 30% and improving deployment reliability.
- Designed and executed automated tests with JUnit and Mockito, increasing test coverage by 25% and reducing post-release defects by 15%.
- Participated in Agile ceremonies (stand-ups, retrospectives, design calls) and collaborated with product and QA teams to troubleshoot production issues through log analysis and SQL queries.

PROJECTS:

SmartEats - Cloud-Native Food Ordering Platform (Microservices + Angular)

Tech Stack: Spring Boot, Angular, Eureka, Docker, Kubernetes (AWS EKS), AWS RDS (MySQL), MongoDB Atlas, Jenkins, SonarQube, ArgoCD, ALB Ingress.

- Built a cloud-native food ordering platform using Spring Boot microservices (Catalog, User, Restaurant, Orders) with Eureka for service discovery and integrated a fully responsive Angular frontend.
- Managed hybrid storage using AWS RDS (MySQL) for transactional data and MongoDB Atlas for order history, ensuring performance and flexibility.
- Containerized services with Docker and deployed on AWS EKS, using ConfigMaps, Secrets, namespaces, and ALB Ingress for routing and scalability.
- Implemented a full CI/CD pipeline using Jenkins and ArgoCD (GitOps), and enforced code quality with sonarQube and Junit tests.

GitHub: <https://github.com/SmartEats-cloudNative>

EDUCATION:

Master of Science in Computer Science - Missouri State University, Springfield, MO, USA

Bachelor of Technology in Electronics and Communication Engineering – Sree Vidyanyikethan College, India
